B.Sc. Computer Science

Syllabus

AFFILIATED COLLEGES

Program Code: 22K

2023 - 2024 onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with "A++" Grade by NAAC, Ranked 21st among Indian Universities by MHRD-NIRF)

Coimbatore - 641 046, Tamil Nadu, India

Program	Program Educational Objectives (PEOs)							
The B. Sc. Computer Science program describe accomplishments that graduates are								
expected	to attain within five to seven years after graduation							
PEO1	To enrich knowledge in core areas related to the field of computer science and mathematics.							
PEO2	To provide opportunities for acquiring in-depth knowledge in Industry 4.0/5.0 tools and techniques and there by design and implement software projects to meet customer's business objectives.							
PEO3	To enable graduates to pursue higher education leading to Master and Research Degrees or have a successful career in industries associated with Computer Science or as entrepreneurs							
PEO4	To enhance communicative skills and inculcate team spirit through professional activities, skills in handling complex problems in data analysis and research project to make them a better team player.							
PEO5	To embed human values and professional ethics in the young minds and contribute towards nation building.							
PEO9	To develop project							

Program	Specific Outcomes (PSOs)							
After the	After the successful completion of B.Sc. Computer Science program, the students are							
expected	to							
PSO1	Impart the fundamental principles and methods of Computer Science to a wide range of applications.							
PSO2	Develop and deploy applications of varying complexity using the acquired mowledge in various programming languages, data structures and algorithms, latabase and networking skills.							
PSO3	To investigate, analyze complex problems by the application of suitable mathematical and research tools, to design Information Technology products and solutions							
PSO4	To identify and utilize the state-of-the-art tools and techniques in the design and development of software products and solutions.							
PSO5	Ability to identify, interpret, analyze and design solutions using appropriate algorithms of varying complexities in the field of information and communication technology.							

Program	Outcomes (POs)
On succe	ssful completion of the B.Sc. Computer Science program
PO1	Disciplinary knowledge: Capable to apply the knowledge of mathematics, algorithmic principles and computing fundamentals in the modeling and design of computer based systems of varying complexity.
PO2	Scientific reasoning/ Problem analysis : Ability to critically analyze, categorizes, formulate and solve the problems that emerges in the field of computer science.
PO3	Problem solving: Able to provide software solutions for complex scientific and business related problems or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, societal and environmental considerations.
PO4	Environment and sustainability: Understand the impact of software solutions in environmental and societal context and strive for sustainable development.
PO5	Modern tool usage: Use contemporary techniques, skills and tools necessary for integrated solutions.
PO6	Ethics: Function effectively with social, cultural and ethical responsibility as an individual or as a team member with positive attitude.
PO7	Cooperation / Team Work: Function effectively as member or leader on multidisciplinary teams to accomplish a common objective.
PO8	Communication Skills: An ability to communicate effectively with diverse types of audience and also able to prepare and present technical documents to different groups.
PO9	Self-directed and Life-long Learning: Graduates will recognize the need for self-motivation to engage in lifelong learning to be in par with changing technology.
PO10	Enhance the research culture and uphold the scientific integrity and objectivity

BHARATHIAR UNIVERSITY::COIMBATORE641046

B.Sc. Computer Science (CBCS PATTERN)

(For the students admitted from the academic year 2023-2026 Batch)

Course code	Digital Fundamentals and Computer Architecture	L	T	P	С
Core/Elective/Supporti ve	Core Paper : 2	4	0	-	4
Pre-requisite	Student should have basic computer knowledge	Syllabus Version		23-2 1war	

On successful completion of this subject the students should have Knowledge on

- 1. To familiarize with different number systems and digital arithmetic & logic circuits
- 2. To understand the concepts of Combinational Logic and Sequential Circuits
- 3. To impart the knowledge of buses, I/O devices, flip flops, Memory and bus structure.
- 4. To understand the concepts of memory hierarchy and memory organization
- 5. To understand the various types of microprocessor architecture

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be able to:	
1	Learn the basic structure of number system methods like binary, octal and hexadecimal and understand the arithmetic and logical operations are performed by computers.	К3
2	Define the functions to simplify the Boolean equations using logic gates.	K1
3	Understand various data transfer techniques in digital computer and control unit operations.	K2
4	Compare the functions of the memory organization	K4
5	Analyze architectures and computational designs concepts related to architecture organization and addressing modes	K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Number System and Arithmetic circuits 12 hours

Number System and Binary Codes: Decimal, Binary, Octal, Hexadecimal – Binary addition, Multiplication, Division – Floating point representation, Complements, BCD, Excess3, Gray Code. Arithmetic Circuits: Half adder, Full adder, Parallel binary adder, BCD adder, Half subtractor, Full subtractor, Parallel binary subtractor - Digital Logic: The Basic Gates – NOR, NAND, XOR Gates.

Unit:2 Combinational Logic and Sequential Circuits 14 hours

Combinational Logic Circuits: Boolean algebra – Karnaugh map – Canonical form Construction and properties – Implementations – Don't care combinations - Product of sum, Sum of products, Simplifications. Sequential circuits: Flip-Flops: RS, D, JK, and T - Multiplexers – Demultiplexers – Decoder Encoder – Shift Registers-Counters.

Unit:3 Input – Output Organization and Data Transfer 12 hours

Input – Output Organization: Input – output interface – I/O Bus and Interface – I/O Bus Versus Memory Bus – Isolated Versus Memory – Mapped I/O – Example of I/O Interface. Asynchronous data transfer: Strobe Control and Handshaking – Priority Interrupt: Daisy- Chaining Priority, Parallel Priority Interrupt. Direct Memory Access: DMA Controller, DMA Transfer. Input – Output Processor: CPU-IOP Communication.

Unit:4	Memory Organization	10 hours
Memory Orga	nization: Memory Hierarchy - Main Memory- Associativ	e memory: Hardware
Organization,	Match Logic, Read Operation, Write Operation. Cache Memor	ry: Associative, Direct,
Set-associative	Mapping - Writing into Cache Initialization. Virtual Memor	ry: Address Space and
Memory Space	ce, Address Mapping Using Pages, Associative Memory	y, Page Table, Page
Replacement.		
Unit:5	Case Studies	6 hours
	Y: Pin out diagram, Architecture, Organization and address	ing modes of 80286-
80386-80486-1	ntroduction to microcontrollers.	
Unit:6	Contemporary Issues	2 hours
Expert lecture	es, online seminars - webinars

Course code	L	T	P	C	
Core/Elective/Supportiv	Core: 3	5	0	0	4
Pre-requisite	Before starting this course one should have a basic understanding of computer programs and computer programming language. If you know the concepts of C programming it will be much easier to understand this course	Syllah Versio	\n		3-24 vard

The main objectives of this course are to:

- 1. Impart knowledge of object oriented programming concepts and implement them in C++
- 2. Enable to differentiate procedure oriented and object-oriented concepts.
- 3. Equip with the knowledge of concept of Inheritance so that learner understands the need of inheritance.
- 4. Explain the importance of data hiding in object oriented programming

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

Oli	the successful completion of the course, student will be able to.	
1	Define the different programming paradigm such as procedure oriented and object	K1
	oriented programming methodology and conceptualize elements of OO	
	methodology	
2	Illustrate and model real world objects and map it into programming objects for a	K2
	legacy system.	
3	Identify the concepts of inheritance and its types and develop applications using	K3
	overloading features.	
4	Discover the usage of pointers with classes	K4
5	Explain the usage of Files, templates and understand the importance of exception	K5
	Handling	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 INTRODUCTION TO C++ 10 hours

Key concepts of Object-Oriented Programming –Advantages – Object Oriented Languages – I/O in C++ - C++ Declarations. Control Structures: - Decision Making and Statements: If. Else, jump, goto, break, continue, Switch case statements - Loops in C++: for, while, do - functions in C++ - inline functions – Function Overloading.

Unit:2 CLASSES AND OBJECTS 10 hours

Declaring Objects – Defining Member Functions – Static Member variables and functions – array of objects –friend functions – Overloading member functions – Bit fields and classes – Constructor and destructor with static members.

Unit:3 OPERATOR OVERLOADING 12 hours

Overloading unary, binary operators – Overloading Friend functions – type conversion – Inheritance: Types of Inheritance – Single, Multilevel, Multiple, Hierarchal, Hybrid, Multi path

Unit:4	POINTERS	13 hours
Declaration	- Pointer to Class, Object - this pointer - Pointers to derived class	sses and Base classes
	Characteristics – array of classes – Memory models – new an	
dynamic ob	ject – Binding, Polymorphism and Virtual Functions.	
Unit:5	FILES	13 hours
	classes – file modes – Sequential Read / Write operations – Bina	
	cess Operation – Templates – Exception Handling - String – Dec	laring and Initializing
string objec	ts – String Attributes – Miscellaneous functions.	
Unit:6	Contemporary Issues	2 hours
	res, online seminars - webinars	2 nours

The main objectives of this course are to:

- 1. Impart knowledge of object oriented programming concepts and implement them in C++
- 2. Enable to differentiate procedure oriented and object-oriented concepts.
- 3. Equip with the knowledge of concept of Inheritance so that learner understands the need of inheritance.
- 4. Explain the importance of data hiding in object oriented programming

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

Oli	the successful completion of the course, student will be able to.	
1	Define the different programming paradigm such as procedure oriented and object oriented programming methodology and conceptualize elements of OO methodology	K1
2	Illustrate and model real world objects and map it into programming objects for a	K2
	legacy system.	
3	Identify the concepts of inheritance and its types and develop applications using	K3
	overloading features.	
4	Discover the usage of pointers with classes	K4
5	Explain the usage of Files, templates and understand the importance of exception	K5
	Handling	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

- 1. Write a C++ Program to create a class to implement the data structure STACK. Write a constructor to initialize the TOP of the STACK. Write a member function PUSH() to insert an element and member function POP() to delete an element check for overflow and underflow conditions..
- 2. Write a C++ Program to create a class ARITHMETIC which consists of a FLOAT and an INTEGER variable. Write member functions ADD (), SUB(), MUL(), DIV() to perform addition, subtraction, multiplication, division respectively. Write a member function to get and display values.
- 3. Write a C++ Program to read an integer number and find the sum of all the digits until it reduces to a single digit using constructors, destructors and inline member functions.
- 4. Write a C++ Program to create a class FLOAT that contains one float data member. Overload all the four Arithmetic operators so that they operate on the object FLOAT
- 5. Write a C++ Program to create a class STRING. Write a Member Function to initialize, get and display stings. Overload the operators ++ and == to concatenate two Strings and to compare two strings respectively.
- 6. Write a C++ Program to create class, which consists of EMPLOYEE Detail like E_Number, E_Name, Department, Basic, Salary, Grade. Write a member function to get and display them. Derive a class PAY from the above class and write a member function to calculate DA, HRA and

PF depending on the grade.

- 7. Write a C++ Program to create a class SHAPE which consists of two VIRTUAL FUNCTIONS Calculate_Area() and Calculate_Perimeter() to calculate area and perimeter of various figures. Derive three classes SQUARE, RECTANGLE, TRIANGE from class Shape and Calculate Area and Perimeter of each class separately and display the result.
- 8. Write a C++ Program to create two classes each class consists of two private variables, a integer and a float variable. Write member functions to get and display them. Write a FRIEND Function common to both classes, which takes the object of above two classes as arguments and the integer and float values of both objects separately and display the result.
- 9. Write a C++ Program using Function Overloading to read two Matrices of different Data Types such as integers and floating point numbers. Find out the sum of the above two matrices separately and display the sum of these arrays individually.
- 10. Write a C++ Program to check whether the given string is a palindrome or not using Pointers
- 11. Write a C++ Program to create a File and to display the contents of that file with line numbers.
- 12. Write a C++ Program to merge two files into a single file.

Course code	Internet Basics	L	T	P	C
Core/Elective/ Supportive	Core Lab: 3	0	0	2	2
Pre-requisite	Knowledge of WINDOWS Operating Systems	Sylla Versi	bus ion	202. Onv	3-24 vard

The main objectives of this course are to:

- 1. Introduce the fundamentals of Internet and the Web functions.
- 2. Impart knowledge and essential skills necessary to use the internet and its various components.
- 3. Find, evaluate, and use online information resources.
- 4. Use Google Apps for education effectively.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

1	Understand the fundamentals of Internet and the Web concepts	K2
2	Explain the usage of internet concepts and analyze its components.	K2
3	Identify and apply the online information resources	K3
4	Inspect and utilize the appropriate Google Apps for education effectively	K3,

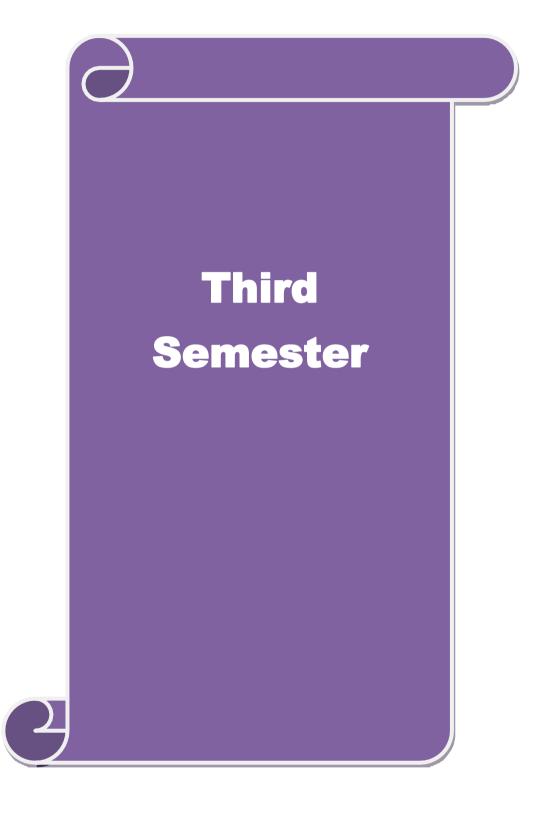

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

- 1. Create an email account in Gmail. Using the account created compose a mail to invite other college students for your college fest, enclose the invitation as attachment and send the mail to at least 50 recipients. Use CC and BCC options accordingly
- 2. Open your inbox in the Gmail account created, check the mail received from your peer from other college inviting you for his college fest, and download the invitation. Reply to the mail with a thank you note for the invite and forward the mail to other friends.
- 3. Assume that you are studying in final year of your graduation and are eagerly looking for a job. Visit any job portal and upload your resume.
- 4. Create a meeting using Google calendar and share meeting id to the attendees. Transfer the ownership to the Manager once the meeting id is generated.
- 5. Create a label and upload bulk contacts using import option in Google Contacts
- 6. Create your own Google classroom and invite all your friends through email id. Post study material in Google classroom using Google drive. Create a separate folder for every subject and upload all unit wise E-Content Materials.
- 7. Create and share a folder in Google Drive using 'share a link' option and set the permission to access that folder by your friends only.
- 8. Create one-page story in your mother tongue by using voice recognition facility of Google Docs.
- 9. Create a registration form for your Department Seminar or Conference using Google Forms.
- 10. Create a question paper with multiple choice types of questions for a subject of your choice, using Google Forms.
- 11. Create a Google form with minimum 25 questions to conduct a quiz and generate a

certificate after submission.					
12. Create a meet using Google Calendar and record the meet using Google Meet.					
13. Create a Google slides for a topic and share the same with your friends.					
14. Create template for a seminar certificate using Google Slides.					
15. Create a sheet to illustrate simple mathematical calculations using Google Sheets.					
16. Create student's internal mark statement and share the Google sheets via link.					
17. Create different types of charts for a range in CIA mark statement using Google Sheets.					
18. Create a mark statement in Google Sheets and download it as PDF, .xls and .csv files

Course code	Data Structures	L	T	P	C
Core/Elective/ Supportive	Core: 4	3	0	0	4
Pre-requisite	Basic understanding of Data storage, retrieval and algorithms.	Syllab Versio			3-24 ward

The main objectives of this course are to:

- 1. To introduce the fundamental concept of data structures
- 2. To emphasize the importance of data structures in developing and implementing efficient algorithms.
- 3. Understand the need for Data Structures when building application
- 4. Ability to calculate and measure efficiency of code
- 5. Improve programming logic skills.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	i ,	
1	Understand the basic concepts of data structures and algorithms	K1-K2
2	Construct and analyze of stack and queue operations with illustrations	K2-K4
3	Enhance the knowledge of Linked List and dynamic storage management.	K2-K3
4	Demonstrate the concept of trees and its applications	K2-K3
5	Design and implement various sorting and searching algorithms for applications and understand the concept of file organizations	K1-K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1	INTRODUCTION	9 hours

Introduction of Algorithms, Analysing Algorithms. Arrays: Sparse Matrices - Representation of Arrays. Stacks and Queues. Fundamentals - Evaluation of Expression Infix to Postfix Conversion

Unit:2 LINKED LIST 8 hours

Linked List: Singly Linked List - Polynomial Addition - Doubly Linked List and Dynamic - Storage Management - Garbage Collection and Compaction.

Unit:3 TREES 10 hours

Basic Terminology - Binary Trees - Binary Tree Representations — Binary Trees-Traversal. Graphs: Terminology and Representations-Traversals - Shortest Paths.

Unit:4	SYMBOL TABLE	9 hours

Symbol Tables: Static Tree Tables - Dynamic Tree Tables - Hash Tables: Hashing Functions - Overflow Handling.

Unit:5	INTERNAL SORTING	7 hours				
Insertion Sort - Quick Sort - 2 Way Merge Sort - Heap Sort.						
Unit:6	Contemporary Issues	2 hours

Course code	Java Programming	L	T	P	C
Core/Elective/Supportiv	Core: 5	6	0	0	4
Pre-requisite	The objective of the course is to train the students to acquire problem-solving skills through object oriented programming	Syllab Versio			3-24 ard

The main objectives of this course are to:

- 1. To expose the students with the introduction to OOPs and advantages of object oriented programming.
- 2. The concepts of OOPs make it easy to represent real world entities.
- 3. The course introduces the concepts of converting the real time problems into objects and methods and their interaction with one another to attain a solution.
- 4. Simultaneously it provides the syntax of programming language Java for solving the real world problems.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	1 ,	
1	The competence and the development of small to medium sized application	K1-K2
	programs that demonstrate professionally acceptable coding	
2	Demonstrate the concept of object oriented programming through Java	K2-K4
3	Apply the concept of Inheritance, Modularity, Concurrency, Exceptions handling	K3
	and data persistence to develop java program	
4	Develop java programs for applets and graphics programming	K3
5	Understand the fundamental concepts of AWT controls, layouts and	K1-K2
	events	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

	En	
Unit:1	FUNDAMENTALS OF OBJECT-ORIENTED	15 hours
	PROGRAMMING	

Object-Oriented Paradigm – Basic Concepts of Object-Oriented Programming – Benefits of Object-Oriented Programming – Application of Object-Oriented Programming. Java Evolution: History – Features – How Java differs from C and C++ – Java and Internet – Java and www – Web Browsers. Overview of Java: simple Java program – Structure – Java Tokens – Statements – Java Virtual Machine.

Unit:2 BRANCHING AND LOOPING 12 hours

Constants, Variables, Data Types - Operators and Expressions – Decision Making and Branching: if, if...else, nested if, switch, ? : Operator - Decision Making and Looping: while, do, for – Jumps in Loops - Labeled Loops – Classes, Objects and Methods.

|--|

Arrays, Strings and Vectors – Interfaces: Multiple Inheritance – Packages: Putting Classes together – Multithreaded Programming.

Ur	nit:4	ERROR HANDLING	15 hours			
Managing Errors and Exceptions – Applet Programming – Graphics Programming.						
Ur	nit:5	MANAGING INPUT / OUTPUT FILES IN JAVA	15 hours			
		Streams- Stream Classes – Byte Stream classes – Character str				
streams – I/O Classes – File Class – I/O exceptions – Creation of files – Reading / Writing						
cha	aracters, By	te-Handling Primitive data Types – Random Access Files.

Course code	Programming Lab – JAVA	L	Т	P	C
Core/Elective/Supportive	Core Lab: 4	0	0	5	4
Pre-requisite		Sylla Versi		2023 Onw	

The main objectives of this course are to:

- 3. The main objective of JAVA Programming Lab is to provide the students a strong foundation on programming concepts and its applications through hands-on training.
- 4. To practice the Basic concepts, Branching and Looping Statements and Strings in C programming
- 5. To implement and gain knowledge in Arrays, functions, Structures, Pointers and File handling

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	1	
1	Understand the basic concepts of Java Programming with emphasis on ethics and	K1, K2
	principles of professional coding	
2	Demonstrate the creation of objects, classes and methods and the	K2
	concepts of constructor, methods overloading, Arrays, branching	
	and looping	
3	Create data files and Design a page using AWT controls and Mouse Events in Java	K2, K3
	programming Implement the concepts of code reusability and debugging.	
4	Develop applications using Strings, Interfaces and Packages and applets	K3
5	Construct Java programs using Multithreaded Programming and	К3
	Exception Handling	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

- 1. Write a Java Applications to extract a portion of a character string and print the extracted string.
- 2. Write a Java Program to implement the concept of multiple inheritance using Interfaces.
- 3. Write a Java Program to create an Exception called payout-of-bounds and throw the exception.
- 4. Write a Java Program to implement the concept of multithreading with the use of any three multiplication tables and assign three different priorities to them.
- 5. Write a Java Program to draw several shapes in the created windows.
- 6. Write a Java Program to create a frame with four text fields name, street, city and pin code with suitable tables. Also add a button called my details. When the button is clicked its corresponding values are to be appeared in the text fields.
- 7. Write a Java Program to demonstrate the Multiple Selection List-box.
- 8. Write a Java Program to create a frame with three text fields for name, age and qualification and a text field for multiple line for address
- 9. Write a Java Program to create Menu Bars and pull down menus.
- 10. Write a Java Program to create frames which respond to the mouse clicks. For each events with mouse such as mouse up, mouse down, etc., the corresponding message to be

	displayed.									
11	. Write a J	ava Program to draw circle, square, ellipse and rectangle at	the mouse click							
	positions.									
12	12. Write a Java Program which open an existing file and append text to that file.

Course code	System Software and Operating Systems	L	T	P	C
Core/Elective/ Supportive	Core: 6	6	0	0	4
Pre-requisite	Students Should have the basic knowledge in computer.	Syllab Versio			3-24 vard

The main objectives of this course are to:

- 1. To understand the processing of programs on a computer system to design and implementation of language processor.
- 2. To enhance the ability of program generation through expansion and gain knowledge about Code optimization using software tools.
- 3. Students will gain knowledge of basic operating system concepts.
- 4. To have an in-depth understanding of process concepts, deadlock and memory management.
- 5. To provide an exposure to scheduling algorithms, devices and information management.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

On	the successful completion of the course, student will be use to:	
1	Know the program generation and program execution activities in detail	K1
2	Understand the concepts of Macro Expansions and Gain the knowledge of Editing	K2-K3
	processes	
3	Remember the basic concepts of operating system	K1
4	Understand the concepts like interrupts, deadlock, memory management and file	K2
	management	
5	Analyze the need for scheduling algorithms and implement different algorithms	K1-K4
	used for representation, scheduling, and allocation in DOS and UNIX operating	
	system.	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 INTRODUCTION TO SYSTEM SOFTWARE 12 hours

Introduction-System Software and machine architecture. Loader and Linkers: Basic Loader Functions - Machine dependent loader features - Machine independent loader features - Loader design options

Unit:2 MACHINE AND COMPILER 15 hours

Machine dependent compiler features - Intermediate form of the program - Machine dependent code optimization - Machine independent compiler features - Compiler design options - Division into passes - Interpreters - p-code compilers - Compiler-compilers.

Unit:3 OPERATING SYSTEM 15 hours

What is an Operating System? – Process Concepts: Definition of Process - Process States - Process States Transition – Interrupt Processing – Interrupt Classes - Storage Management: Real Storage: Real Storage Management Strategies – Contiguous versus Non-contiguous storage allocation – Single User Contiguous Storage allocation - Fixed partition multiprogramming – Variable partition multiprogramming.

Unit:4	VIRTUAL STORAGE	15 hours
	ge: Virtual Storage Management Strategies – Page Replacement	
	and Paging - Page Size. Processor Management: Job and P	
Preemptive V	s Non-preemptive scheduling – Priorities – Deadline scheduling	<u> </u>
Unit:5	DEVICE AND INFORMATION MANAGEMENT	15 hours
	nformation Management Disk Performance Optimization: Operation	
	 Need for disk scheduling – Seek Optimization – File and Da 	
System – Fur	ctions - Organization - Allocating and freeing space - File descriptions	iptor – Access control
matrix.

Course Objectives:	·								
The main objectives of	f this course are to:								
1. Linux is a multi-user and multi-tasking operating system and after learning the concepts of an									
operating system									
2. Student will be able to write simple shell programming using Linux utilities, pipes and filters.									

- 3. The file system, process management and memory management are discussed.
- 4. Various commands used by Linux shell is also discussed which makes the users to interact with each other.

5.	Bourne shell programming is	dealt in depth which can be used to develop	applications.						
Evn	ected Course Outcomes:								
		the course, student will be able to:							
1	1 Describe the architecture and features of Linux Operating System and distinguish it from other Operating System.								
2	Develop Linux utilities to perform File processing, Directory handling, User Management and display system configuration								
3		pipes, redirection, filters and Pipes		K2					
4	Apply and change the owne commands.	ership and file permissions using advance Un	ix	К3					
5	Build Regular expression to implement shell scripts for	o perform pattern matching using utilities and real time applications.		K3-K6					
K1	- Remember; K2 - Understand	d; K3 - Apply; K4 - Analyze; K5 - Evaluate;	K6 - Create

Course code		Programming Lab – LINUX and SHELL PROGRAMMING	L	Т	P	С
Core/Elective/Supportive		Core Lab: 5	0	0	6	4
Pre-requisite		Students should have the prior basic knowledge in operating system.	Sylla Versi	bus ion	2023 Onw	

The main objectives of this course are to:

- 1. Describe the architecture and features of Linux Operating System
- 2. To create programs in the Linux environment using Linux utilities and commands.
- 3. Student is given an introduction of Linux shell commands and they will be able to write own shell scripts.
- 4. Shell programming is dealt in depth which can be used to develop applications.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

1	Develop Linux utilities to perform File processing, Directory handling and User Management	K1, K2
2	Understand and develop shell scripts using pipes, redirection, filters, Pipes and display system configuration	K2-K3
3	Develop simple shell scripts applicable to file access permission network administration	К3
4	Apply and change the ownership and file permissions using advance Unix commands.	K4-K5
5	Create shell scripts for real time applications.	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

- 1. Write a shell script to stimulate the file commands: rm, cp, cat, mv, cmp, wc, split, diff.
- 2. Write a shell script to show the following system configuration:
 - a. currently logged user and his log name
 - b. current shell, home directory, Operating System type, current Path setting, current working directory
 - c. show currently logged number of users, show all available shells
 - d. show CPU information like processor type, speed
 - e. show memory information
- 3. Write a Shell Script to implement the following: pipes, Redirection and tee commands.
- 4. Write a shell script for displaying current date, user name, file listing and directories by getting user choice.
- 5. Write a shell script to implement the filter commands.
- 6. Write a shell script to remove the files which has file size as zero bytes.
- 7. Write a shell script to find the sum of the individual digits of a given number.
- 8. Write a shell script to find the greatest among the given set of numbers using command line arguments.
- 9. Write a shell script for palindrome checking.
- 10. Write a shell script to print the multiplication table of the given argument using for loop.

Course code	RDBMS & Oracle	L	Т	P	C
Core/Elective/ Supportive	Core: 8	6	0	0	4
Pre-requisite	Basic knowledge about the data, table and database in computers	Syllab Versio			3-24 vard

The main objectives of this course are to:

- 1. The course describes the data, organizing the data in database, database administration.
- 2. To grasp the different issues involved in the design of a database system.
- 3. To study the physical and logical database designs and database modeling like relational, Hierarchical, network models, database security, integrity and normalization.
- 4.It also gives introduction to SQL language to retrieve the data from the database with suitable application development.
- 5. Provide strong foundation of database concepts and to introduce students to application development in DBMS.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	,	
1	Understand the basic concepts of Relational Data Model, Entity-	K1-K2
	Relationship Model and process of Normalization	
2	Understand and construct database using Structured Query Language	K1-K3
	(SQL) in Oracle9i environment.	
3	Learn basics of PL/SQL and develop programs using Cursors,	K1-K4
	Exceptions, Procedures and Functions.	
4	Understand and use built-in functions and enhance the knowledge of	K1-K3
	handling multiple tables	
5	Attain a good practical skill of managing and retrieving of data using	K2-K4
	Data Manipulation Language (DML)	

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 DATABASE CONCEPTS 15 hours

Database Concepts: A Relational approach: Database – Relationships – DBMS – Relational Data Model – Integrity Rules – Theoretical Relational Languages. Database Design: Data Modeling and Normalization: Data Modeling – Dependency – Database Design – Normal forms – Dependency Diagrams – De -normalization – Another Example of Normalization.

Unit:2 ORACLE9i 15 hours

Oracle9i: Overview: Personal Databases – Client/Server Databases – Oracle9i an introduction – SQL *Plus Environment – SQL – Logging into SQL *Plus - SQL *Plus Commands – Errors & Help – Alternate Text Editors - SQL *Plus Worksheet - iSQL *Plus. Oracle Tables: DDL: NamingRules and conventions – Data Types – Constraints – Creating Oracle Table – Displaying Table Information – Altering an Existing Table – Dropping, Renaming, Truncating Table – Table Types

- Spooling - Error codes.

Unit:3	WORKING WITH TABLE	15 hours

Working with Table: Data Management and Retrieval: DML – adding a new Row/Record – Customized Prompts – Updating and Deleting an Existing Rows/Records – retrieving Data from

Table – Arithmetic Operations – restricting Data with WHERE clause – Sorting – Revisiting Substitution Variables – DEFINE command – CASE structure. Functions and Grouping: Built-in functions –Grouping Data. Multiple Tables: Joins and Set operations: Join – Set operations.

111	functions – Grouping Data. Multiple Tables: Joins and Set operations: Join – Set operations.							
U	nit:4	PL/SQL	15 hours					
PI	PL/SQL: A Programming Language: History – Fundamentals – Block Structure – Comments –							
	Data Types – Other Data Types – Declaration – Assignment operation – Bind variables –							
	Substitution Variables – Printing – Arithmetic Operators. Control Structures and Embedded SQL:							
		tures – Nested Blocks – SQ L in PL/SQL – Data Manipulation -	~					
		L/SQL Cursors and Exceptions: Cursors – Implicit & Explicit C						
		R loops – SELECTFOR UPDATE – WHERE CURRENT OF						
		Cursor Variables – Exceptions – Types of Exceptions.						
_		, ,,						
U	nit:5	PL/SQL COMPOSITE DATA TYPES	12 hours					
PI	L/SQL Com	posite Data Types: Records – Tables – arrays. Named Blocks:	Procedures –					
Fι	unctions – P	ackages – Triggers – Data Dictionary Views.

Course code	Visual Basic	L	T	P	C
Core/Elective/ Supportive	Core: 9	6	0	0	4
Pre-requisite	Knowledge in programming language and oops concept.	Syllab Versio			
Course Objectives:					

The main objectives of this course are to:

- 1. The main aim of the course is to cover visual basic programming skills required for modern software development.
- 2. To study the advantages of Controls available with visual basic.
- 3. To gain a basic understanding of database access and management using data controls.
- 4. To facilitate the learner to carry out project works using the tools available in VB and MS Access.

Exp	ected Course Outcomes:	
On	the successful completion of the course, student will be able to:	
1	Demonstrate fundamental skills in utilizing the tools of a visual environment such	K1
	as command, menus and toolbars.	
2	Implement SDI and MDI applications using forms, dialogs and other types of GUI	K2
	components.	
3	Understand the connectivity between VB with MS-ACCESS database.	К3
4	Implement the methods and techniques to develop projects.	K4
5	Attain a good practical skill of managing ODBC and Data Access Objects	K2-K4
K1	- Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create	

Unit:1 INTRODUCTION TO VB 15 hours

Getting Started with VB6, Programming Environment, working with Forms, Developing an application, Variables, Data types and Modules, procedures and control structures, arrays. Working with Controls: Creating and using controls, working with control arrays.

Unit:2 MENUS IN VB 15 hours

Menus, Mouse events and Dialog boxes: Mouse events, Dialog boxes, MDI and Flex grid: MDI, Using the Flex grid control.

Unit:3 ODBC AND DATA ACCESS OBJECTS 15 hours

ODBC and Data Access Objects: Data Access Options, ODBC, Remote data objects, ActiveX

EXE and ActiveX DLL: Introduction, Creating an ActiveX EXE Component, Creating ActiveX

DLL Component.

Unit:4 OBJECT LINKING AND EMBEDDING 15 hours

Object Linking and Embedding: OLE fundamentals, Using OLE Container Control, Using OLE Automation objects, OLE Drag and Drop, File and File System Control: File System Controls, Accessing Files.

Unit:5 CONTROLS IN VB 12 hours

Additional controls in VB: sstab control, setting properties at runtime, adding controls to tab, list control, tabstrip control, MS Flexgrid control, Why ADO, Establishing a reference, Crystal and

Da	ata reports.

Course code	Programming Lab – VB & Oracle	L	T	P	C
Core/Elective/Support	ve Core Lab: 6	0	0	6	4
Pre-requisite	Students should have the theoretical knowledge in visual basic and oops concept.	Sylla Versi	bus ion	202. Onw	3-24 vard

The main objectives of this course are to:

- 1. To develop applications using Graphical User Interface tools.
- 2. To understand the design concepts.
- 3. To design and build database systems and demonstrate their competence.
- 4. To create requirement analysis and specification for software applications.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	1 /	ı				
1	Understand the concepts of Visual Basic.					
2	Learn the advantages of Controls in VB					
3	Design and develop the event- driven applications using Visual Basic framework.					
4	Apply the knowledge of database methods.					
5	Learn basics of PL/SQL and develop programs using Cursors, Exceptions,	К6				
	Procedures and Functions	IX0				

K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate; K6 – Create

Programs 36 hours

- 1. Construction of an Arithmetic Calculator (Simple).
- 2. Writing simple programs using loops and decision-making statements.
 - a. Generate Fibonacci series.
 - b. Find the sum of N numbers.
- 3. Write a program to create a menu and MDI Forms.
- 4. Write a program to display files in a directory using DriveListBox, DirListBox and FileListBox control and open, edit and save text file using Rich text box control.
- 5. Write a program to illustrate Common Dialog Control and to open, edit and save text file.
- 6. Write a program to implement animation using timers.
- 7. Write a simple VB program to accept a number as input and convert it into
 - a. Binary b. Octal c. Hexa-decimal
- 8. Create a table for Employee details with Employee Number as primary key and following fields:
 - Name, Designation, Gender, Age, Date of Joining and Salary. Insert at least ten rows and perform various queries using any one Comparison, Logical, Set, Sorting and Grouping operators.
- 9. Write a PL/SQL to update the rate field by 20% more than the current rate in inventory table which has the following fields: Prono, ProName and Rate. After updating the table a new field (Alter) called for Number of item and place for values for the new field without using PL/SQL block.
- 10. Write a PL/SQL program to implement the concept of Triggers

	11. Write a PL/SQL program to implement the concept "Procedures".									
	12. Write a VB program to manipulate the student mark list with oracle database connectivity									
	program.

Course code	PYTHON Programming	L	T	P	C
Core/Elective/ Supportive	Elective : I	6	0	0	4
Pre-requisite	Knowledge on logic of the programs and oops concept.	Syllab Versio			3-24 vard

The main objectives of this course are to:

- 1. To introduce the fundamentals of Python Programming.
- 2. To teach about the concept of Functions in Python.
- 3. To impart the knowledge of Lists, Tuples, Files and Directories.
- 4. To learn about dictionaries in python.
- 5. To explores the object-oriented programming, Graphical programming aspects of python with help of built in modules..

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	, , , , , , , , , , , , , , , , , , , ,					
1	Remembering the concept of operators, data types, looping statements in Python					
	programming.					
2	Understanding the concepts of Input / Output operations in file	K2				
3	Applying the concept of functions and exception handling	K3				
4	Analyzing the structures of list, tuples and maintaining dictionaries	K4				
5	Demonstrate significant experience with python program development environment	K4-K6				

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 BASICS OF PYTHON 10 hours

BASICS: Python - Variables - Executing Python from the Command Line - Editing Python Files - Python Reserved Words - Basic Syntax-Comments - Standard Data Types - Relational Operators - Logical Operators - Bit Wise Operators - Simple Input and Output.

Unit:2 CONTROL STATEMENTS 10 hours

CONTROL STATEMENTS: Control Flow and Syntax - Indenting - if Statement - statements and expressions- string operations- Boolean Expressions -while Loop - break and continue - for Loop. LISTS: List-list slices - list methods - list loop - mutability - aliasing - cloning lists - listparameters. TUPLES: Tuple assignment, tuple as return value -Sets - Dictionaries

Unit:3 FUNCTIONS 10 hours

FUNCTIONS: Definition - Passing parameters to a Function - Built-in functions- Variable Number of Arguments - Scope – Type conversion-Type coercion-Passing Functions to a Function - Mapping Functions in a Dictionary – Lambda - Modules - Standard Modules – sys – math – time - dir - help Function.

Unit:4 ERROR HANDLING 12 hours

ERROR HANDLING: Run Time Errors - Exception Model - Exception Hierarchy - Handling Multiple Exceptions - Data Streams - Access Modes Writing - Data to a File Reading - Data From a File - Additional File Methods - Using Pipes as Data Streams - Handling IO Exceptions - Working with Directories.

Uı	nit:5	OBJECT ORIENTED FEATURES	12 hours

Course code	Computer Networks	L	T	P	C
Core/Elective/ Supportive	Elective : I	6	0	0	4
Pre-requisite	Students should have the knowledge on computer connectivity and connectivity peripherals.	Syllab Versio			3-24 vard

The main objectives of this course are to:

- 1. To identify various components in a data communication system and understand state-of-the-art in network protocols, architectures and applications.
- 2. To enable students through the concepts of computer networks, different models and their involvement in each stage of network communication.
- 3. To educate the concepts of terminology and concepts of the OSI reference model and the TCP/IP reference model and protocols such as TCP, UDP and IP.
- 4. To be familiar with the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks.
- 5. Introduce the student to a network routing for IP networks and how a collision occurs and how to solve it and how a frame is created and character count of each frame.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

Oli	On the successful completion of the course, student will be able to.					
1	Remember the organization of computer networks, factors influencing computer	K1				
	network development and the reasons for having variety of different types of					
	networks.					
2	Understand Internet structure and can see how standard problems are solved and	K2				
	the use of cryptography and network security.					
3	Apply knowledge of different techniques of error detection and correction to detect	K3				
	and solve error bit during data transmission.					
4	Analyze the requirements for a given organizational structure and select the most	K4				
	appropriate networking architecture and technologies					
5	Knowledge about different computer networks, reference models and the functions	K2-K4				
	of each layer in the models					

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 BASICS OF NETWORKS AND OSI MODEL 15 hours

Network Hardware: LAN – WAN – MAN – Wireless – Home Networks. Network Software: Protocol Hierarchies – Design Issues for the Layers – Connection-oriented and connectionless services – Service Primitives – The Relationship of services to Protocols. Reference Models: OSI Reference Model – TCP/IP reference Model – Comparison of OSI and TCP/IP -Critique of OSI and protocols – Critique of the TCP/IP Reference model.

Unit:2 PHYSICAL LAYER 15 hours

PHYSICAL LAYER - Guided Transmission Media: Magnetic Media – Twisted Pair – Coaxial Cable – Fiber Optics. Wireless Transmission: Electromagnetic Spectrum – Radio Transmission – Microwave Transmission – Infrared and Millimeter Waves – Light Waves. Communication Satellites: Geostationary, Medium-Earth Orbit, Low Earth-orbit Satellites – Satellites versus Fiber.

DATA-LINK LAYER: Error Detection and correction – Elementary Data-link Protocols – Sliding Window Protocols. MEDIUM-ACCESS CONTROL SUB LAYER: Multiple Access Protocols – Ethernet – Wireless LANs - Broadband Wireless – Bluetooth. Unit:4 NETWORK LAYER 15 hours NETWORK LAYER: Routing algorithms – Congestion Control Algorithms. TRANSPORT LAYER: Elements of Transport Protocols – Internet Transport Protocols: TCP. Unit:5 APPLICATION LAYER 12 hours APPLICATION LAYER: DNS – E-mail. NETWORK SECURITY: Cryptography – Symmetric Key Algorithms – Public Key Algorithms – Digital Signatures. Unit:6 Contemporary Issues Expert lectures, online seminars - webinars Total Lecture hours 75 hours Text Book(s) 1 Computer Networks, Andrew S. Tanenbaum, 4th edition, PHI. Course code	Software Testing	L	T	P	C
Core/Elective/ Supportive	Skill based Subject : 3	6	0	0	3
Pre-requisite	Basic knowledge in software project and SDLC	Syllabus		2023-24 Dnward	

The main objectives of this course are to:

- 1. To study fundamental concepts in software testing
- 2. To discuss various software testing issues and solutions in software unit test, integration and system testing.
- 3. To expose the advanced software testing topics, such as object-oriented software testing methods.
- 4. List a range of different software testing techniques and strategies and be able to apply specific automated unit testing method to the projects.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

1	Explain the basic concepts and the processes that lead to software testing	K2
2	Design test cases from the given requirements using Black box testing techniques	К3
3	Identify the test cases from Source code by means of white box testing techniques	К3
4	Know about user acceptance testing and generate test cases for it	K4
5	Examine the test adequacy criteria to complete the testing process	K4

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 SOFTWARE DEVELOPMENT LIFE CYCLE MODELS 1:

Software Development Life Cycle models: Phases of Software project – Quality, Quality Assurance, Quality control – Testing, Verification and Validation – Process Model to represent Different Phases - Life Cycle models. White-Box Testing: Static Testing – Structural Testing – Challenges in White-Box Testing.

Unit:2 BLACK-BOX TESTING 15 hours

Black-Box Testing: What is Black-Box Testing? - Why Black-Box Testing? - When to do Black-Box Testing? - How to do Black-Box Testing? - Challenges in White Box Testing - Integration Testing: Integration Testing as Type of Testing - Integration Testing as a Phase f Testing - Scenario Testing - Defect Bash.

Unit:3 SYSTEM AND ACCEPTANCE TESTING 15 hours

System and Acceptance Testing: system Testing Overview – Why System testing is done? – Functional versus Non-functional Testing - Functional testing - Non-functional Testing – Acceptance Testing – Summary of Testing Phases.

Unit:4 PERFORMANCE TESTING 15 hours

Factors governing Performance Testing – Methodology of Performance Testing – tools for Performance Testing – Process for Performance Testing – Challenges. Regression Testing: What is Regression Testing? – Types of Regression Testing – When to do Regression Testing – How to do Regression Testing – Best Practices in Regression Testing.

Un	nit:5	TEST PLANNING, MANAGEMENT, EXECUTION	12 hours								
		AND REPORTING									
Test	Planning,	Management, Execution and Reporting: Test Planning - Test	t Management – Test								
Proc	cess – Tes	t Reporting -Best Practices. Test Metrics and Measurement	ts: Project Metrics -

Core/Elective/ Supportive	Core: 10	5	0	0	4
Pre-requisite	Basic knowledge in 2D, 3D and multimedia file formats	Syllab Versio			3-24 vard

The main objectives of this course are to:

- 1. Design and apply two dimensional graphics and transformations.
- 2. Design and apply three dimensional graphics and transformations.
- 3. Apply Illumination, color models and clipping techniques to graphics.
- 4. Understood Different types of Multimedia File Format.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

Oli	the successful completion of the course, student will be able to.	
1	Explain applications, principles, commonly used and techniques of computer graphics and algorithms for Line-Drawing, Circle- Generating and Ellipse-Generating.	K2
2	Students will get the concepts of 2D and 3D, Viewing, Curves and surfaces,	K3
	Hidden	
	Line/surface elimination techniques	
3	Studies concepts of Multimedia Systems, Text, Audio and Video tools	K3
4	Compressing audio and video using MPEG-1 and MPEG-2	K4
5	Creates Animation with special effects using algorithms	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 OUTPUT PRIMITIVES 15 hours

Output Primitives: Points and Lines – Line-Drawing algorithms – Loading frame Buffer – Line function – Circle-Generating algorithms – Ellipse-generating algorithms. Attributes of Output Primitives: Line Attributes – Curve attributes – Color and Grayscale Levels – Area-fill attributes – Character Attributes.

Unit:2 2D GEOMETRIC TRANSFORMATIONS 15 hours

2D Geometric Transformations: Basic Transformations – Matrix Representations – Composite Transformations – Other Transformations. 2D Viewing: The Viewing Pipeline – Viewing Coordinate Reference Frame – Window-to-Viewport Co-ordinate Transformation - 2D Viewing Functions – Clipping Operations.

Unit:3 TEXT 15 hours

Text: Types of Text – Unicode Standard – Font – Insertion of Text – Text compression – File formats. Image: Image Types – Seeing Color – Color Models – Basic Steps for Image Processing – Scanner – Digital Camera – Interface Standards – Specification of Digital Images – CMS – Device Independent Color Models – Image Processing software – File Formats – Image Output onMonitor and Printer.

Course Designed By:

Course code	Project Work Lab	L	T	P	C
Core/Elective/Supportiv	Core: 11	0	0	5	8
Pre-requisite	Students should have the strong knowledge in any one of the programming languages in this course.	Syllab Versio			3-24 ward

The main objectives of this course are to:

- 1. To understand and select the task based on their core skills.
- 2. To get the knowledge about analytical skill for solving the selected task.
- 3. To get confidence for implementing the task and solving the real time problems.
- 4. Express technical and behavioral ideas and thought in oral settings.
- 5. Prepare and conduct oral presentations

Exp	Expected Course Outcomes:						
On	On the successful completion of the course, student will be able to:						
1	Formulate a real world problem and develop its requirements develop a design solution for a set of requirements.	К3					
2	Test and validate the conformance of the developed prototype against the original requirements of the problem.	K5					
3	Work as a responsible member and possibly a leader of a team in developing software solutions.	К3					
4	Express technical ideas, strategies and methodologies in written form. Self-learn new tools, algorithms and techniques that contribute to the software solution of the project.	K1-K4					
5	Generate alternative solutions, compare them and select the optimum one.	K6					
K1	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create						
	THE WAY THE PARTY OF THE PARTY						

AIM OF THE PROJECT WORK t work is to acquire practical knowledge on the imple

- 1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied.
- 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts.
- 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.

VivaVoce

- 1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the **Annexure Report** available in the College, for a total of 100 marks at the last day of the practical session.
- 1. Out of 100 marks, 25 marks for CIA and 75 for CEE (50 evaluation of project report + 25 Viva Voce).

Course code		Programming Lab – Graphics & Multimedia	L	Т	P	C
Core/Elective/Supportive		Core Lab: 7	0	0	6	4
Pre-requisite		Students should have the basic knowledge on C and C++ to do computer graphics and multimedia applications.	Sylla Versi	bus ion	202 Onv	3-24 vard

The main objectives of this course are to:

- 1. To learn the basic principles of 2-dimensional computer graphics.
- 2. Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.
- 3. Provide an understanding of mapping from a world coordinates to device coordinates, clipping and projections.
- 4. To be able to discuss the application of computer graphics concepts in the development of computer games, information visualization and business applications.
- 5. To comprehend and analyse the fundamentals of animation, virtual reality, underlying technologies, principles and applications.

O 41	guagesful completion of the course student will be able to							
On the successful completion of the course, student will be able to:								
1 1	Understand the basic concepts of computer graphics.	K1						
2	2 Design scan conversion problems using C and C++ programming. K2							
3	Apply clipping and filling techniques for modifying an object.	К3						
	Understand the concepts of different type of geometric transformation of objects in 2D.	K4						
	Understand and develop the practical implementation of modeling, rendering viewing of objects in 2D	g, K6						
K1 - F	Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6	- Create						
	Educate to elevate

Core/Elective/ Supportive Basic knowledge on knowledge representation, reasoning and problem solving skills Elective: II 5 0 0 4 2023-24 Downard	Course code	Artificial Intelligence and Expert Systems	L	T	P	C
Pre-requisite Basic knowledge on knowledge representation, reasoning and problem solving skills Version Downard		Elective: II	5	0	0	4
	Pre-requisite	Basic knowledge on knowledge representation, reasoning and problem solving skills				

The main objectives of this course are to:

- 1. To understand the basic concepts of Artificial Intelligence and identify the AI problems and domains.
- 2. To provide search techniques to solve the problems.
- 3. To represent and access the domain specific knowledge.
- 4. Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems

Expected Course Outcomes: On the successful completion of the course, student will be able to: 1 Understand the nature of AI problems and task domains of AI. 2 Apply the appropriate search procedures to solve the problems by using best algorithms. 3 Analyze and select the suitable knowledge representation method. K3 4 Manipulate the acquired knowledge and infer new knowledge. K4 5 Demonstrate the development of AI systems by encoding the knowledge. K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 INTRODUCTION 15 hours

Introduction: AI Problems – AI techniques – Criteria for success. Problems, Problem Spaces, Search: State space search – Production Systems – Problem Characteristics – Issues in design of Search.

Unit:2 HEURISTIC SEARCH TECHNIQUES 12 hours

Heuristic Search techniques: Generate and Test – Hill Climbing – Best-Fist, Problem Reduction, Constraint Satisfaction, Means-end analysis.

Unit:3 KNOWLEDGE REPRESENTATION 15 hours

Knowledge representation issues: Representations and mappings – Approaches to Knowledge representations – Issues in Knowledge representations – Frame Problem.

Unit:4 PREDICATE LOGIC 15 hours

Using Predicate Logic: Representing simple facts in logic – Representing Instance and Isa relationships – Computable functions and predicates – Resolution – Natural deduction.

Unit:5 REPRESENTING KNOWLEDGE USING RULES 15 hours

Representing knowledge using rules: Procedural Vs Declarative knowledge – Logic programming – Forward Vs Backward reasoning – Matching – Control knowledge Brief explanation of Expert Systems-Definition- Characteristics-architecture- Knowledge Engineering- Expert System Life Cycle-Knowledge Acquisition Strategies- Expert System Tools.

Course code	Web Technology	L	Т	P	С
Core/Elective/ Supportive	Elective: II	5	0	0	4
Pre-requisite	Basic knowledge in web server, browser and web application	Syllab Versio	ous on	202. Onv	3-24 vard

The main objectives of this course are to:

- 1.On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies.
- 1. Students will gain the skills and project-based experience needed for entry into web application and development careers
- 3. Understand best technologies for solving web client/server problems
- 4. Use Java script for dynamic effects and to validate form input entry
- 5. Analyze to Use appropriate client-side or Server-side applications

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

	viii successiui successiui si siis successi, suuusiis viiii su usis suc			
1	Understand and analyse the TCP/IP basics.			
2	Understand Domain server name, FTP, TFTP, basics of WWW, web browser architecture.	K2		
3	Knowledge of Microsoft and java technologies, dynamic web pages, DHTML, ASP and JSP.	K2-K3		
4	Understanding active web pages, Java Applet, Java bean, CORBA, RMI and EDI	K2-K3		
	architecture			
5	Knowledge on XML, XML parser, WAP	K4-K6		

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 TCP/IP 15 hours

TCP/IP: TCP/IP Basics – Why IP address – Logical Address - TCP/IP Example- The concept of IP address – Basics of TCP – Features of TCP – Relationship between TCP and IP – Ports and Sockets – Active Open and Passive Open - TCP Connections – What makes TCP reliable? – TCP Packet format - Persistent TCP connections – UDP – Differences between TCP and UDP.

Unit:2 DNS 12 hours

DNS-E-mail-FTP-TFTP-History of WWW-Basics of WWW and Browsing - Local information on the internet – HTML – Web Browser Architecture – Web Pages and Multimedia – Remote Login (TELNET).

Unit:3 INTRODUCTION TO WEB TECHNOLOGY 15 hours

Introduction to Web Technology: Web pages – Tiers – Concept of a Tier – Comparison of Microsoft and Java Technologies – Web Pages – Static Web Pages – Plug-ins – Frames – Forms. Dynamic Web Pages: Need – Magic of Dynamic Web Pages – Overview of Dynamic Web Page Technologies – Overview of DHTML – Common Gateway Interface – ASP – ASP Technology – ASP Example – Modern Trends in ASP – Java and JVM – Java Servlets – Java Server Pages.

Core/Elective/ Supportive	Elective: III	5	0	0	4
Pre-requisite	Basic knowledge on data, database, and statistical functions	Syllabu Version		202. Onv	!!

The main objectives of this course are to:

- 2. To introduce the concept of data Mining as an important tool for enterprise data management and cutting edge technology for building competitive advantage.
- 2. To enable students to effectively identify sources of data and process it for data mining
- 3. To make students well versed in all data mining algorithms, methods of evaluation.
- 4. To impart knowledge of tools used for data mining
- 5. To provide knowledge on how to gather and analyze large sets of data to gain useful business

Course code	Open Source Software	L	T	P	C
Core/Elective/ Supportive	Elective: III	5	0	0	4
Pre-requisite	Basic understanding in scripting language and SQL	Syllab Versio			3-24 vard

The main objectives of this course are to:

- 1. To expose students to free open source software environment and introduce them to use open source packages.
- 2. Demonstrate different open source technology like Linux, PHP & MySQL with different packages.
- 3. To understand open source software practices and tools.
- 4. To use the open source software in operating systems, Programming and web framework in approaching real time applications.

Expected Course Outcomes:

On the successful completion of the course, student will be able to:

1	Understand the significance of open source practices and guidelines.	K2
2	Manipulate open source databases based on user requirements	К3
3	Implement web programming with PHP	К3
4	Integrate open source web frameworks in an application	K4
5	Write desktop and web applications with Python	K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 INTRODUCTION TO OPEN SOURCE 15 hours

Introduction to open sources – Need of open sources – advantages of open sources –application of open sources. Open source operating systems: LINUX: Introduction – general overview –Kernel mode and user mode –process – advanced concepts –scheduling – personalities – cloning – signals – development with Linux.

Unit:2 MYSQL 12 hours

MySQL: Introduction – setting up account – starting, terminating and writing your own SQL programs-record selection Technology – working with strings – Date and Time – sorting Query results – generating summary –working with meta data –using sequences – MySQL and Web.

Unit:3 PHP 15 hours

PHP: Introduction –programming in web environment –variables- constants – data types – operators – statements – functions – arrays – OOP – string manipulations and regular expression – file handling and data storage – PHP and SQL database – PHP and LDAP – PHP connectivity – sending and receiving E-mails – debugging and error handling – security –templates.

Unit:4 PYTHON 15 hours

Syntax and style – Python objects – numbers – sequences – strings – lists and tuples – dictionaries – conditional loops –files – input and output – errors and exceptions – functions – modules – classes and OOP – execution environment.

Unit:5	PERL	15 hours							
Pert backgroun	Pert backgrounder - pert overview - pearl parsing rules - variables and data - statements and								
control structu	control structures – subroutines -packages and modules – working with files – data manipulation.								

Unit:6	Contemporary Issues	3 hours							
Expert lecture	es, online seminars – webinars								
	Total Lecture hours	75 hours

Cours	e code		Programming Lab – Software Testing	L	Т	P	C	
Core/l	Elective/	Supportive	Skill based Subject Lab: 4	0	0	4	3	
Pre-r	requisite	,	Basic knowledge on software project development in SDLC	Syllabı Versio		2023-24 Onward		
Cours	e Object	tives:						
The ma	ain objec	ctives of this o	course are to:					
2	 To gain knowledge about recording the test case in different modes. To design and construct the test cases using Test Script Language. To learn about GUI objects and bitmap objects 							
Expec	ted Cou	rse Outcome	s:					
On th	ne succes	sful completi	on of the course, student will be able to:					
1			tance of software quality/software testing and appriques for information systems development.	oly		K	1	
2		te test cases frous quality in	om software requirements using various test proceuprovement.	esses for	•	K	2	
3	Underst	and flow grap	hs and apply path testing.			K	3	
4								
5	Identify the inputs and deliverables of the testing process and work together as a team in preparing a report K6							
K1 -	Rememb	er; K2 - Und	erstand; K3 - A pply; K4 - Analyze; K5 - Evaluate	; K6 - 0	Crea	te		
Prog	rams		(Constant and a contract of the		3	6 hou	ırs	

Write at least 10 TEST CASES for the following programs. Test cases can be for Input data, Conditional expressions, control transfer, output, etc. Run-Test-Debug- until all the test cases are in success status. Marks distribution as follows:

- 1. List of Test Descriptions (at least 10) for the Program. (20%)
- 2. Test Cases (40%)
- 3. Program with all test case results success (30%)
- 4. Record (10%)

TEST CASE EXAMPLE:

Test -Id	Test Description	Test Steps	Expected	Actual	Status
Test Iu	rest Description	Test Steps	Output	Output	Status
TC-01	Acceptance of 10 digit input data	Input 10 Digit Number	Accepting 10 digit number	Accepted 10 digit number	Success
TC-02	Non- acceptance of character data	Input a character data X	Character X should not be accepted	Accepting Character data	Failure

Modify PIC X(10) into PIC 9(10) and then run program for Test-id TC-02 again

Test -Id	Test Description	Test Steps	Expected Output	Actual Output	Status
TC-02	Non- acceptance of character data	Input a character data X	Character X should not be accepted	Character data not accepted	Success
TC-03	Digit sum of 10 digit is in single digit	Output data	Single digit sum	Single digit Sum	Success

- 1. Test the C program: Finding the sum of individual digits of a 10-digit number until a single digit is produced.
- 2. Test the C Program: Accept the inputs student name, marks in five subjects and declare the result as PASS if the student gets minimum 40 in each subject; otherwise declare the result as FAIL.
- 3. Test the C program: Program for generating n prime numbers
- 4. Test the C program: Sort and store the elements of two arrays of integers into the third list.
- 5. Test the C program: Experiment the operations of a stack using array implementation.

6. Test the C program: Menu-driven option for queue operations like add, remove and display.
7. Test the C++ program: Palindrome string checking program (using pointers)
